ALPEREN AYDIN

WEB DEVELOPER – Astronautic Engineer

PROFILE

I am a self-taught Front-End Web Developer. Spending most of the quarantine time (10 months) in USA by myself taught me how to stand on my foot. By looking to the life from different angles, I finally found my passion with skiing and coding. Having worked with different types of groups such as project teams, non-governmental organizations and work places, improved my communication and organization skills, provide different aspects and made me fluent in English. I code on CSS3 with Bootstrap, JavaScript (ES5, ES6), and currently working on angular.
